

Digital Advance Care Plans

Touchstone Life Care is the digital advance care planning system that integrates with clinical information systems, is easy to use, and gives aged care organisations compliance above and beyond what is currently required by the Aged Care Quality Standards and Royal Commission recommendations.

TLC advance care plans are legal, securely stored in the cloud and instantly retrievable by QR code, giving aged care staff and medical personnel certainty about a consumer's wishes, in a heartbeat.

What makes Touchstone Life Care advance care plans different is that the plan uses a guided conversation format with easy-to-understand questions and simple language, and requires minimal reading and writing. It is intuitive to use for both staff and clients. This means aged care providers can offer advance care planning as a value-add or as a revenue-generating service.

And because Touchstone Life Care advance care plans are digital, providers can trust that the most up-to-date version

will be accessed, that it has been automatically shared with trusted contacts (like family, carers or GP), and that the plan won't get lost in transit.

Bring person-centered, digital advance care planning to your organisation and deliver better service to consumers whose wishes will be instantly found.

Reduce stress and conflict with families because the consumer's wishes are documented and shared.

Bring certainty to staff on what to do in emergencies, improve hospital relationships as you reduce unnecessary hospitalisations, and bring confidence to management that compliance obligations have been met.
